

The School of Science and Engineering

Biomedical Engineering (BMEN)

Biomedical Engineering consists of the application of engineering techniques and principles to problems and processes of biology or medicine. Such a broad class of study needs to be narrowed in order to achieve adequate depth, and the emphasis chosen by our faculty is—first and foremost—to provide students with the opportunity to acquire a rigorous engineering education. This basis then serves as a springboard to concentrated study of biomechanics, biomaterials, bioelectronics, bioelectricity, and cell and tissue engineering during the remaining undergraduate years.

The department was founded in 1977, so we are a relatively mature department in a new field—a field in which the potential for making meaningful contributions is unlimited. Our backgrounds are diverse and our undergraduate and graduate teaching programs are extensive. All of us on the faculty are actively engaged in research sponsored by federal, state or private organizations, and we believe that this enhances our teaching abilities by keeping each of us in the forefront of knowledge in our specialties.

CREATIVITY, RESEARCH, DESIGN: CHARACTERISTICS OF TULANE'S UNDERGRADUATE PROGRAM

Hallmarks of our undergraduate curriculum are the research and design experiences that are coordinated through the two semester sequences in 'Research and Professional Practice' and 'Team Design' so that every biomedical engineering student participates in an individual research project as well as a team design project.

Distinctive features of Tulane's undergraduate curriculum:

- First year course is designed to: help students decide if Biomedical Engineering is the right career for them, help develop creativity, help students work together in teams, and explore the design process from idea generation to construction and testing a prototype
- Breadth in fundamentals: math, science, engineering sciences (statics, dynamics, mechanics of materials, materials science and engineering, circuits), professional practice
- Anatomy: A semester-long class that includes an active-learning gross anatomy laboratory

- Quantitative Physiology: Taught by experts in the field, faculty in Tulane's School of Medicine
- Depth in areas of interest: Domains of teaching and research include: bioelectronics, biomaterials, biomechanics, bioelectricity and cell and tissue engineering
- Students are required, while still undergraduates, to take a graduate course as a follow-up to a 'domain' course
- Required team-design project: Teams of four biomedical engineering students each work with a disabled 'client' in the local community to design a device or process to assist the client; culminating with a design show in the spring
- Required year-long independent research project: Students work from January of the junior year until December of the senior year on an individual research or design project with a faculty member in the department or from the LSU or Tulane Schools of Medicine
- Our faculty members are active in research and teach both undergraduate and graduate courses. All of our faculty members are members of ASEE (American Society for Engineering Education) and all of our full professors have been elected as Fellows of AIMBE (American Institute for Medical and Biological Engineering).

DEPARTMENTAL MISSION

Our mission is to inspire and work with students as we develop and apply engineering methods to confront health science challenges.

DEPARTMENTAL VISION

The Department of Biomedical Engineering is committed to being a global leader in biomedical engineering scholarship. Our faculty, staff, and students are all important parts of the team that provide distinctive opportunities for creative solutions to biomedical engineering research and design problems. We aim for: excellence in undergraduate and graduate education, meaningful and innovative research, and service dedicated to advancing the field of biomedical engineering.

UNDERGRADUATE PROGRAM OBJECTIVES

Our undergraduate program provides students with the breadth required for participation in the interdisciplinary field of biomedical engineering and the depth required by engineers to advance the practice in our discipline. Our objective is to prepare graduates who are able to successfully pursue:

- advanced studies leading to research or professional practice in biomedical engineering
- advanced studies leading to research or professional practice in the health sciences
- practice in biomedical engineering industries or related technical and professional fields

UNDERGRADUATE INSTRUCTIONAL OUTCOMES

We give our students strong foundations in engineering, mathematics, and the life and basic sciences, in a coherent and coordinated curriculum. We provide our students with unique opportunities to conduct focused research or design projects in areas of individual interest, and we prepare our students for a successful transition to advanced study and professional careers. Specifically, students who obtain a bachelor's degree from our department will be able to:

1. Understand and apply principles and tools of mathematics, science, and engineering to formulate and analyze problems, specializing in issues found at the interface between biological and technological systems.
2. Compose and test hypotheses, and interpret resulting data.
3. Design systems, devices and processes to meet designated specifications or open-ended objectives; evaluate and justify the resulting designs within contemporary cultural and broad societal contexts.
4. Work effectively in multidisciplinary teams.
5. Exemplify professionally and ethically responsible conduct.
6. Seek and value opportunities for extracurricular and post-graduate education and development.

7. Communicate the short- and long-term challenges and opportunities inherent in the field of biomedical engineering to both technical colleagues and the general public.

FACILITIES

The Department of Biomedical Engineering is located in the Lindy Claiborne Boggs Center and includes more than 16,000 square feet of biomedical engineering office, laboratory, and classroom space. Major items of research equipment include:

Computers - Biomedical Engineering Server: Apple Xserver;
Various workstations: PCs and Macintosh computers in research laboratories and the departmental computer/laboratory.

Image Analysis: PC and Macintosh with frame grabbers, scanners, etc.

Physiology Laboratory: A physiology laboratory is equipped to perform numerous physiology experiments and demonstrations.

Solid Mechanics: Digitally controlled MTS axial/torsional universal testing system, console-mounted and portable strain gauge conditioners, ultrasonic testing apparatus.

Fluid Mechanics: Brookfield cone-plate viscometer, Cahn surface tension balance, flow visualization analysis system, Electronics pulsating bubble surfactometer, computational fluid dynamics software.

Experimental and Computational Tissue Mechanics: Universal Cartilage Testing Device, High Resolution Imaging System, ultrasound indentation probe, biosafety cabinet, centrifuge, microscope, incubator.

Biomaterials: EG&G PAR computerized electrochemical and polarographic measurement systems, metallographic specimen preparation equipment, Azur Environmental toxicity analyzer.

Electronics: Full suite of GPIB connected test equipment to support development of HC11 and Basic Stamp microcontrollers. LabVIEW is used for algorithm and control loop development and prototyping of implant, telemedicine, and monitoring applications.

Pulmonary Function: Spirometers, flow and pressure instrumentation, data acquisition, acoustic measurement systems.

Tissue Engineering: This facility is fully equipped for cell/tissue culture and a range of chemistry and microscopy techniques. Major

equipment includes biosafety cabinets, centrifuges, microscopes, incubators, microplate washer and reader, FTIR.

Undergraduate laboratories are available for experiments associated with required courses in medical sciences (BMEN 313/314), and bioelectronics (BMEN 273). These labs are also used in elective courses in biomechanics (BMEN 330), biomaterials (BMEN 323), and cell and tissue engineering (BMEN 340). A computer laboratory/classroom equipped with a SMARTboard and projector and 12 PCs, a printer and scanner are also available for undergraduates, particularly those taking BMEN 382 (required) and BMEN 361 (elective).

CURRICULUM

The undergraduate program in biomedical engineering is built upon a rigorous engineering science foundation that is, in turn, based upon a broad curriculum of natural sciences, mathematics, electives in humanities and social sciences, and design. Although students are encouraged to concentrate their professional electives in a subfield of interest in biomedical engineering (*e.g.*, biomechanics, bioelectronics, bioelectricity, biomaterials, or tissue engineering) or biomedical sciences (for premed students), there are no formal “tracks” within the sequence. *The undergraduate curriculum is designed primarily to prepare our undergraduates for advanced study. More than two-thirds of our graduates continue on to graduate or professional training after graduation from Tulane.* We have a philosophy of ‘rigorous breadth’ in biomedical engineering which can best be characterized by the undergraduate curriculum described below.

Tulane University BMEN Undergraduate Curriculum

YEAR 1

Semester One	18 hours
	Course Title (Credit Hours)
MATH 121	Calculus I (4)
CHEM107/117	General Chemistry I and Lab (4)
ENGL 101	Writing (4)
PHYS 131	General Physics I and Lab (4)
TIDES 100	Grand Challenges in Sci and Engr (2)

Semester Two **18 hours**

	Course Title (Credit Hours)
MATH 122	Calculus II (4)
CHEM 108/118	General Chemistry II and Lab (4)
CPSC 101	Software Design and Programming (3)
PHYS 132	General Physics II and Lab (4)
ENGR 241	Statics (3)

YEAR 2

Semester One **17 hours**

MATH 221	Calculus III (4)
CELL 101/211	General Biology I and Lab (4)
ENGR 243	Mechanics of Materials (3)
BMEN 201	Experiments & Experimental Design (3)
ENGR 201	Electric Circuits (3)

Semester Two **17 hours**

MATH 224	Applied Math (Diff Eqns.) (4)
BMEN 260	Intro Organic & Bio-Chemistries (3)
ENGR 312	Materials Science and Engr. (3)
BMEN 273	Biomedical Electronics and Lab (4)
HUSL	Humanities/Social Sciences Elective (3)

YEAR 3

Semester One **16 hours**

BMEN 303/313	Anatomy and Physiology and Lab (4)
HUSL	Human/Social Sciences Elective (3)
BMEN 3xx	“Domain” class (3)
BMEN 3xx	“Domain” class (3)
ENGR 344	Biofluids and Biotransport (3)
BMEN 371	BMEN Seminar (0)

Semester Two**15 hours**

BMEN 304/314	Quantitative Physiology and Lab (4)
HUSL	Human/Social Sciences Elective (3)
BMEN 382	Math Modeling (3)
BMEN 490	Research & Professional Practice I (2)
*PELECT/BMEN 6xx	Professional Elective of Graduate Class (3)

YEAR 4**Semester One****14 hours**

*PELECT/BMEN 6xx	Professional Elective of Graduate Class (3)
HUSL	Human/Social Sciences Elective (3)
HUSL	Human/Social Sciences Elective (3)
BMEN 491	Research & Professional Practice II (2)
BMEN 403	Team Design I (2)
BMEN 405	Service Learning I (1)
BMEN 671	BMEN Seminar (0)

Semester Two**14 hours**

*PELECT/BMEN 6xx	Professional Elective of Graduate Class (3)
*PELECT/BMEN 6xx	Professional Elective of Graduate Class (3)
HUSL	Humanities/Social Science Elective (3)
BMEN 404	Team Design II (3)
BMEN 407	Service Learning II (1)
BMEN 672	Research Day Conference (1)

* Students take 3 Professional Electives and 1 BMEN 6XX graduate course as a follow-up to a BMEN 3XX domain course.

TULANE CORE REQUIREMENTS

The BMEN curriculum satisfies the Tulane University curriculum requirements of:

- Writing (4 hours): satisfied by ENGL 101
- Biomedical engineering majors are not required to satisfy the language requirement.

- Scientific inquiry (9 hours to 12 hours comprising quantitative reasoning, physical science and a life science, one of which contains a laboratory component): satisfied by MATH 121, MATH 122, MATH 221, MATH 224; PHYS 131, PHYS 132; CHEM 107/117, CHEM 108/118, CELL 101/211
- Cultural Knowledge: (18 credits) satisfied by six hours of humanities/fine arts and six hours of social sciences, plus six additional credits of humanities, fine arts, or social sciences.
- Public Service (2-3 hours): satisfied by BMEN 403/404
- Understanding interdisciplinary scholarship (1 hour–TIDES seminar)
- Capstone experience: satisfied by BMEN 490/491

DEPARTMENT OF BIOMEDICAL ENGINEERING REQUIREMENTS:**Continuation Requirements:**

The BMEN curriculum is sequential and layered so that students can master prerequisite material prior to the study of engineering science and biomedical engineering domain material. Students that intend to major in biomedical engineering must have completed MATH 121, MATH 122; CHEM 107/117, CHEM 108/118; and PHYS 131, PHYS 132 (or equivalent) earning a “B” or better prior to the start of the second year of study. Students with a GPA below 3.000 in these courses must petition the BMEN faculty to seek approval if they want to continue in the program.

Professional Electives

The professional electives listed in the BMEN curriculum include at least two of the BMEN 300-level elective “domain” courses and at least one BMEN 600-level course. The other professional elective courses may be any courses that meet the student's professional goals. Up to two ROTC courses may be used to meet this requirement.

Premedical students may use the professional electives in the junior year to take organic chemistry. However, many premedical students prefer to take organic chemistry during the summer. Some medical schools require a second English course, and this can be one of the humanities electives. Most medical schools also require an additional semester of biology with laboratory, and this is also considered as a professional elective.

“Domain” classes – BMEN 3xx

BMEN 323 Biomaterials

BMEN 361 Bioelectricity

BMEN 330 Biomechanics

BMEN 340 Cell and Tissue Engineering

BMEN 6xx courses are graduate courses, one of which is required as a follow-up to one of the selected BMEN 3xx domain classes.

Research and Design Experiences

Hallmarks of our curriculum are the research and design experiences that are coordinated through the two semester sequences in Professional Practice and Design (490, 491) and Team Design (403, 404). Every student participates in an *individual research project* as well as a *team design project*.

The team design projects, which recently have been supported by the National Science Foundation and the Joe W. and Dorothy Dorsett Brown Foundation, are tailored to the needs of clients with disabilities who are referred to the department by several community agencies. The team designs are evaluated for safety and then presented and judged in a public design competition. The team design experience of working for an extended period with a handicapped client—while having the opportunity to apply engineering foundations and real world design and construction skills to assist the client—has been extremely rewarding for our students. Participation in the team design experience satisfies the Tulane University public service requirement.

In addition to the team design project, each student participates in an individual year-long research project generally with a biomedical engineering faculty member or with faculty in departments of the Tulane or LSU medical schools. The list of research projects completed by the class of 2005, available at <http://www.bmen.tulane.edu>, covers an impressive range of activities. The students thus have substantial research experience -- *while still undergraduates* -- that includes writing a comprehensive thesis describing the research performed and an oral presentation of the work to the faculty and fellow students during the annual Undergraduate Research Day Conference. Participation in the individual research project satisfies the Tulane University capstone experience requirement.

MINORS

Biomedical engineering students may also elect to pursue a major or minor offered by another department. Students should contact the appropriate department chair and work out a program of study.

Since many engineering students elect to add a minor in mathematics or business, these programs are listed:

Mathematics Minor

A mathematics minor or major is awarded for the following coursework.

MATH 121, 122, 221 Calculus I, II, III

MATH 224 Introduction to Applied Math or

MATH 217 Discrete Math

MATH 309 Linear Algebra

Plus: One additional course at the 300 level or above.

Business Minor

An undergraduate business minor is awarded for the following coursework.

ECON 101 Microeconomics

ACCT 203 Financial Accounting

And any four of the following:

ACCT 301 Managerial Accounting

FINC 352 Financial Management

OBHR 331 Organization Behavior

PSOM 371 Operations Management

MKTG 382 Marketing Management

Plus:

One additional course from the A. B. Freeman School of Business.

MINOR IN BIOMEDICAL ENGINEERING

Students in chemical and biomolecular engineering may earn a Minor in biomedical engineering through completion of the following courses:

CELL 101/211	Cell Biology, with Lab
BMEN 303/313	Anatomy and Physiology, with lab
BMEN 304/314	Quantitative Physiology, with lab

1 course selected from:

BMEN 330	Biomechanics (Note: requires ENGR 241 and ENGR 243 prerequisites)
BMEN 340	Cell and Tissue Engineering
BMEN 361	Bioelectricity
BMEN 323	Biomaterials (Note: requires ENGR 312 as a prerequisite)

FACULTY AND COURSE DESCRIPTIONS

e-mail: info@bmen.tulane.edu

PROFESSORS

Nicholas J. Altiero, Professor and Dean, Ph.D., The University of Michigan at Ann Arbor, 1974.

Research interests: Computational mechanics, fracture mechanics, biomechanics.

Kirk J. Bundy, Professor; Ph.D., Stanford University, 1975.

Research interests: Biomaterials, corrosion, biosensors, cell adhesion, environmental science.

Donald P. Gaver, Alden J. "Doc" Laborde Professor and Department Chair, Director of Graduate Studies; Ph.D., Northwestern University, 1988.

Research interests: Biofluid mechanics, pulmonary mechanics, bioremediation, biocomputing.

Cedric F. Walker P.E., Professor and Director, Freshman Programs; Ph.D., Duke University, 1978.

Research interests: Telemedicine, neural stimulation, implantable monitoring devices.

ASSOCIATE PROFESSORS

Ronald C. Anderson, Associate Professor; Ph.D., Tulane University, 1987.

Research interests: Biomechanics, orthopaedic materials.

David A. Rice P.E., Associate Professor and Director of Undergraduate Studies; Ph.D., Purdue University, 1974.

Research interests: Physiologic modeling, cardiopulmonary mechanics, bioacoustics, instrumentation and signal processing.

Jun-Kyo Francis Suh, Associate Professor; Ph.D., Rensselaer Polytechnic Institute, 1989.

Research interests: Mechanics of collagen based connective tissues, cartilage tissue engineering, repair of articular cartilage defects, brain injury, computational biomechanics.

ASSISTANT PROFESSORS

Bum-Rak Choi, Assistant Professor; Ph.D. University of Pittsburgh, 2001.

Research interests: Experimental and computational electrophysiology, optical mapping, signal analysis, image analysis.

Darryl R. Overby, Assistant Professor; Ph.D. Massachusetts Institute of Technology, 2002.

Research interests: Cellular mechanotransduction, ocular biomechanics, and cell and tissue bio-engineering.

VISITING PROFESSOR

James C. Eason, Visiting Professor; Ph.D., Duke University, 1995.

Research interests: Computational bioelectricity, cardiac modeling.

PROFESSORS EMERITUS

Paul L. Nunez, Professor; Ph.D., University of California at San Diego, 1969.

Research interests: Electroencephalography, signal processing, neocortical dynamics.

William C. Van Buskirk P.E., Professor and Chair Emeritus of Biomedical Engineering, Dean Emeritus of Engineering; Ph.D., Stanford University, 1970.

Courses in Biomedical Engineering (Undergraduate and Graduate)

A course with a three-digit number, such as 101, lasts for one semester. A course with a double number, such as 101-102, lasts for both semesters. Courses with numbers from 100 to 199 are ordinarily open to first-year students; 200 to 299 are ordinarily open to sophomores; 300 to 399 are ordinarily open to juniors; 400 to 499 are ordinarily open to seniors; 600 to 699 are open to advanced undergraduate and graduate students; and 700 to 799, to graduate students only.

REGULARLY SCHEDULED COURSES

201 Experiments & Experimental Design (3)

Prof. Anderson

Prerequisite: BMEN 102

This course investigates measurement, error analysis and the treatment of uncertainties in biomedical engineering. Students will be provided an introduction to statistics, including probability and distributions, confidence intervals, sampling and hypothesis tests on the mean. Sources of potential bias (and how to avoid them) and various experimental designs commonly utilized in biomedical engineering will also be explored. Useful computational tools will be introduced and utilized throughout the course.

260 Introduction to Organic and Bio-Chemistries (3)

Prof. Bundy; Prof. Choi

Prerequisite: CHEM 108 and CHEM 118, or approval of instructor
This course introduces the main principles of organic chemistry and biochemistry, preparing the student for BMEN 303/304. Topics include nomenclature of organic compounds and

biomolecules, major reactions of organic chemistry, relationship between chemical structures and biological functions, and the reaction pathways of major metabolic processes. Students will be introduced to the three-dimensional structure of organic compounds and biomolecules using molecular models and software tools.

273/773 Biomedical Electronics with Lab (4)

Prof. Walker

Prerequisite: ELEN 201 or ENGR 201

Rectifiers, filters, regulators and power supplies. Analog amplifiers and active filters of interest for medical devices. Combinational and sequential digital logic design techniques and circuits. Brief overview of modulation, encoding, and interfacing. Electrical safety. Extensive weekly lab projects.

303/703 Anatomy and Physiology (3)

Prof. Dancisak

Prerequisites: MATH 224, BMEN 260, CELL 101

Co-requisite: BMEN 313/713

This course is taught by the Structural and Cellular Biology department at the Tulane Medical School's Human Anatomy Lab. The course objectives are to learn to identify the principal components of the musculoskeletal, peripheral nervous, central nervous, visual and auditory systems and to be able to relate the structures and their functions.

304/704 Quantitative Physiology (3)

Tulane University Health Sciences Center Staff

Prerequisite: BMEN 303/313 or BMEN 703/713

Corequisite: BMEN 314/714

This course places emphasis upon the chemical basis of life; cells and cellular metabolism; histology and tissues; the endocrine, skeletal and nervous systems; respiratory, digestive, cardiovascular, lymphatic and reproductive systems; nutrition and metabolism; water, electrolyte and acid-base balance, and human growth and development.

313/713 Anatomy and Physiology Lab (1)

Prof. Dancisak

Co-requisite: BMEN 303/703

This course involves students in learning the principles and applications of anatomy and physiology. Dissection and exploration of preserved animals and cadavers are integral components of the lab. Computer software is used to explore the

three-dimensional aspects of human anatomy. Physiological instruments will be used to demonstrate the interaction of physiological systems through electrocardiography, Spirometry, pO₂ and pCO₂, and for body composition analysis. Subject matter will include levels of organization, metabolism, histology, and the integumentary skeletal, muscular, neurological and endocrine systems.

314/714 Quantitative Physiology Lab (1)

Staff

Co-requisite: BMEN 304/704

Subject matter will include blood, nutrition, and metabolism; and the cardiovascular, lymphatic, digestive, respiratory, urinary, and reproductive systems.

323/723 Biomaterials (3)

Prof. Bundy

Prerequisite: ENGR 312

The objective of this course is to deepen the student's knowledge of phenomena that influence the success of surgical implants used *in vivo*. Building upon the introductory material covered in ENGR 312, basic concepts of materials science and engineering relevant to this topic are discussed. In addition to engineering performance issues, fundamental factors affecting the biocompatibility of implant devices will also be covered. Laboratory experiments will be utilized, in a supplemental fashion, to illustrate selected aspects of this material and to provide an introduction to procedures used to evaluate biomaterials. This course will serve as a bridge for students who wish to take more advanced graduate level biomaterials courses in the future.

330/730 Biomechanics (3)

Prof. Suh, Prof. Anderson

Prerequisite: ENGR 243

This course introduces students to the various interdisciplinary fields in biomechanics, such as orthopaedic biomechanics, biofluid mechanics, soft tissue mechanics, and the biomechanics of human movement. Specific topics include: kinematics and energy/power during human activity; dynamics of human movement; the analysis of forces and stresses/strains in biological structures under loading; constitutive models for biological materials; and the relationship between structure and function in tissues and organs.

340/740 Cell and Tissue Engineering (3)

Prof. Overby

Prerequisite: BMEN 260

This course addresses the complex interactions between living tissues, implant biomaterials, and the extracellular microenvironment, stressing the importance of cellular- and molecular-level phenomena in macroscopic, tissue-level events. After taking this course, students will be able to explain the roles of cells/tissues and biomaterials in coagulation and fibrinolysis, inflammation, wound healing, hypersensitivity and foreign-body responses, and carcinogenesis. In this class, students will also be exposed to current technologies of cell and molecular biology used to control the behavior of living cells and tissues. Current cell and tissue engineering research topics will be incorporated into class discussions and laboratory projects.

361/761 Bioelectricity (3)

Prof. Eason

Prerequisite: ELEN 201 or ENGR 201

The objective of this course is to introduce the student to bioelectricity of excitable cells from a quantitative perspective. Topics include membrane transport phenomena, the ionic basis of action potentials, the Hodgkin - Huxley model, propagation of action potentials down excitable fibers, the response of cells to external stimuli, and the current flow in the medium surrounding the electrically active cell. The course also incorporates virtual bioelectricity labs designed to familiarize the student with the concepts presented in lecture.

382/782 Mathematical Modeling and Analysis of Biological Systems (3)

Prof. Gaver, Prof. Eason

Prerequisite: MATH 224

The objective of this course is to teach basic mathematical modeling constructs and analysis techniques that are used for studying biological processes. Topics to be covered include ordinary differential equations, compartment systems, basics of dynamic systems, stability, statistical inference and model construction. These will be applied to study models of chemical kinetics, physiological control, AIDS transmission, population dynamics, and growth. Students will use Mathematics to develop and analyze models.

403-404 Team Design Project I and II (2,2)

Prof. Rice

Prerequisite: Senior standing

Techniques and experience in the solution of constrained and open-ended design problems. Lecture topics include all aspects of the design process, including goal setting, idea generation, prototyping, fabrication, and product and evaluation. Also included are technical presentation, project planning and management. Included as needed are other topics such as standards, fastening and joining, motors and control, esthetics and finish. Each team will design and construct a device or system to assist an individual with a disability. These designs are presented in a public show during the second semester.

405 Service Learning: Beyond Design (1)

Prof. Rice

Prerequisite: Approval of instructor

Required co-requisite: BMEN/ENGR 403 or BMEN/ENGR 404

The required BMEN 403/404 design sequence is centered on the design and construction of a device or system to assist an individual with a disability or a group servicing such individuals. As an option, students may choose to supplement their interaction with their clients with a service learning component that follows Tulane's guidelines for service learning courses and specifically requires: Completing at least 40 hours in a community setting during the semester; keeping a journal of weekly activities that will allow students to describe and evaluate his/her experiences with the activity; and must create a product that can be evaluated as part of the course grade (e.g., a review paper on an issue relevant to the service activity or some product of value to the site).

409-410 Special Problems in Biomedical Engineering (1-4)

Staff

Independent study and investigation of special problems in biomedical engineering. Details to be arranged with individual biomedical engineering faculty members.

490-491 Biomedical Research and Professional Practice I and II (2,2)

Staff

This course introduces the tools, techniques, and rules necessary to function professionally as a researcher or engineer. Topics include economic analysis, ethics, professional communication including writing and oral presentation, research techniques including

literature searching, citation, and the structure of a scientific paper. An integral part of the course is a year-long research or design project under the direction of a faculty member or other scientist or professional. This culminates in a senior thesis and a presentation in departmental seminar.

493 Advanced Undergraduate Research (2)

Prof. Anderson

Prerequisite: Approval of instructor; admission to fifth year BS-MS program

In order to meet undergraduate degree requirements, this course will allow fifth year students to more effectively concentrate on their research projects in lieu of completing the course requirements of BMEN 491. The grade for BMEN 493 will be listed as In Progress (IP) until such time as the master's thesis is completed, whereupon the student's adviser and thesis committee will assign a grade necessary to fulfill the bachelor's degree requirements.

611 Cardiac Electrophysiology (3)

Prof. Eason

Prerequisite: BMEN 361

An engineering perspective on the electrical behavior of the heart. Topics include the normal electrical excitation of the heart, membrane ionic channels, contraction, the basics of electrocardiography, arrhythmias and mechanisms of arrhythmogenesis, sudden cardiac death, and the electrical therapies for disturbances in cardiac rhythm. Virtual labs are also included to aid the learning process.

627 Biomaterials and Biocompatibility (3)

Prof. Bundy

Prerequisite: BMEN 323 or equivalent

Building upon the fundamental material presented in BMEN 323, this course discusses structure-property relationships for the metallic, polymeric, ceramic, and composite materials used in surgical implants. Factors involved in the design of implants and processes used in their manufacture are also presented. Various aspects of biocompatibility are discussed in terms of effects (such as corrosion and wear) that the host environment has on implant materials, effects that species released by degradation processes have on the host tissues, and test methods for the study of these effects.

631 Continuum Models in Biomedical Engineering (3)

Prof. Suh

Prerequisite: ENGR 243, ENGR 344, BMEN 330

The course begins with a presentation of the kinematics of continuous media and elementary tensor manipulations. We then cover the conservation principles of mass, linear momentum, angular momentum, and energy. Additional topics include the formulation of constitutive laws, continuum models in electrodynamics, and simple descriptions of piezoelectric materials. These concepts will be applied to fundamental problems in bio-solid mechanics, bio-fluid mechanics, and bio-electromagnetism.

633 Fluid Mechanics for Biomedical Engineers (3)

Prof. Gaver

Prerequisites: ENGR 243, ENGR 344

This course covers general intermediate/advanced fluid mechanics and provides a foundation from which to base one's studies of biofluid mechanics. Issues pertinent to the study of biofluid mechanics will be emphasized. Topics to be studied include kinematic principles, the Navier-Stokes equations, boundary conditions for viscous flows, basic solutions to steady and unsteady Navier-Stokes equations, turbulence, analysis of the vorticity equation, and interfacial phenomena. Whenever possible, problems of a biological nature are used as examples.

634 Soft Tissue Mechanics (3)

Prof. Suh

Prerequisite: ENGR 243, BMEN 330

This course provides an introduction to the various approaches used in modeling soft tissues, with particular attention paid to those of the musculoskeletal system (e.g. ligament, tendon, cartilage). Particular emphasis will be placed on the theoretical and experimental consequences of the large deformation behavior of these tissues. An important objective of this class is to enable the student to develop a sense for the physical and mathematical relationships between the many types of models (and the associated experiments) currently being utilized in soft tissue mechanics.

636 Introduction to the Finite Element Method (3)

Staff

Prerequisite: ENGR 330 or equivalent

Matrix structural analysis techniques as applied to frames, problems in plane strain, plane stress, and axisymmetric and 3-D

structures. Development of the isoparametric family of finite elements. Use of user-written and -packaged software.

661 Introduction to Computational Biomechanics (3)

Prof. Suh

This course covers fundamentals of computational methods with the emphasis in biomechanics applications. The computational methods include finite element methods and finite difference methods at the introductory level. The course will use MATLAB as the official computational tool to implement these methods. The underlying theories of these numerical methods are taught, and example problems are discussed during the lecture. Example problems include those from implant design, bone biomechanics, soft tissue biomechanics, etc. in static and dynamic conditions. The course also discusses some special issues such as the stability/convergence criteria and the error estimation. The student works on a term project to exercise these issues on a biomechanics problem of the student's choice.

667 Pulmonary Mechanics (3)

Prof. Gaver

Prerequisites: MATH 224, BMEN 633 or equivalent

This is a survey course in which mechanical models of the pulmonary system are discussed. Topics to be addressed include mucous transport, airflow/diffusion in the pulmonary airways, ventilation/perfusion relationships, flow through collapsible airways and interfacial phenomena.

671-672 Research Day Conference (0)

Each week, a one-hour seminar on research within or outside the department is presented. During the spring semester, all seniors are required to give a presentation on their project or internship. Attendance of all graduate students is required in the fall semester.

674 Data Acquisition and Control (3)

Prof. Walker

Prerequisite: ELEN 303, BMEN 373

Acquisition, digital processing, and output of signals of biomedical interest. Closed-loop control applications for medical devices. Programming in the National Instruments LabVIEW environment. In-lab and final projects.

676 Advanced Topics in Excitable Media (3)

Prof. Eason

Prerequisite: BMEN 361

This course addresses the generic behavior of excitable media such as nerve and muscle tissues, and oscillating chemical reactions. The course focuses on the generic mathematical models pertinent to excitable media and the nonlinear-dynamics tools for analyzing them. Topics include the membrane as a first order system, the FitzHugh-Nagumo model, phase-plane analysis, limit cycles and oscillatory responses of the membrane.

690 Medical Image (3)

Prof. Choi

An introductory course on digital imaging processing techniques concentrating on the practical approach to image analysis. Lecture topics include sampling theory, point processing, noise filtering, image restoration, morphological operators, featured extraction and clustering/classification of objects. Requirements: Students should be familiar with matrix calculation, fourier transformation, convolution, and probability theory. Since most of the image analysis routines are already available in Matlab, students should be familiar with the basics of Matlab.

721-722 Directed Readings in Biomedical Engineering (1-6)

Taught on a tutorial basis, this course allows a student to make an in-depth study in an area of expertise of members of the department. Some recent and current topics include non-Newtonian fluid mechanics, the mechanics of the inner ear, the mechanics of bone, the mechanics of soft tissue, ceramics engineering, physical metallurgy, laser applications in medicine, and modeling of neural networks.

LESS FREQUENTLY SCHEDULED COURSES

602 Biosystems (3)

Prof. Rice

Prerequisite: BMEN 373 or equivalent

This course gives students the skills to interpret or predict the behavior of physiologic systems in order to study normal and pathologic phenomena. The body uses many feedback control mechanisms to maintain homeostasis, the keeping of a constant interior environment (e.g., pH, temperature, blood pressure, balance, bone stress, muscle length). Transfer functions characterize organ physiology. These functions are the building blocks of an organ system model. By studying these models, complex behavior often can be easily interpreted. Further, these models often suggest ways to make noninvasive physiologic measurements. Applications include: vicious cycles, such as

hyperventilation syndrome, and how to break them; hierarchical, parallel, and other redundant systems; causes of instabilities such as Cheyne-Stokes breathing; open- and closed-loop control of anesthesia and artificial organs. Reference will be made to several common mechanisms such as the thermostat. Lecture demonstrations include pulmonary and cardiovascular measurement. A term paper on a topic of the student's choice is required.

606 Biomedical Acoustics (3)

Prof. Rice

Prerequisite: BMEN 304, MATH 221

Introduction to sounds in the physiological and medical arena. Topics include physics of sound propagation, sources and mechanisms of cardiac and respiratory sound production, sound transmission, auscultation and stethoscope evaluation, psychoacoustics and auditory perception, speech production and structure of the speech signal, medical ultrasound applications and safety.

616 Neural Augmentation (3)

Prof. Walker

Prerequisite: BMEN 373

Implantable and external electrical stimulation devices and technology for the control of pain, functional electrical stimulation, and other neural prostheses are discussed. Additionally, the anatomy of the central nervous system is taught through the use of a programmed learning sequence.

618 Electrodiagnosis (3)

Prof. Walker

Prerequisite: BMEN 373

Application of medical instrumentation in clinical diagnosis including EKG, EMG, multimodality-evoked potentials, stress tests, ultrasound, and computed tomography. The lectures cover the system design of the instruments and review the conditions they are designed to detect. The lab consists of an applications demonstration in one of the local medical facilities.

626 Biomaterials Research Problems and Methodology (3)

Prof. Bundy

Prerequisite: BMEN 323

This course emphasizes a detailed consideration of selected topics that are currently the focus of biomaterials research, as well as consideration of experimental and theoretical methodology used to

approach these and other biomaterials problems. The specific topics will change from year to year as the field of biomaterials develops.

628 Surgical Applications of Biomaterials (3)

Prof. Bundy

Prerequisite: BMEN 627 or equivalent

This course emphasizes specific uses of biomaterials in various branches of surgery, specific materials used, and problems that may be a consequence of such use. Topics discussed include orthopaedic, cardiovascular, dental, and other applications.

635 Advanced Soft Tissue Biomechanics (3)

Prof. Suh

Prerequisite: BMEN 634, BMEN 636

The class is designed to provide students with advanced modeling topics in musculoskeletal soft-tissue biomechanics. The course material consists of an introduction to the anatomical structure of various musculoskeletal soft tissues such as ligament, tendon, and cartilage, followed by fundamentals and general principles in mechanics necessary to understand mathematical modeling of these tissues. The main focus is placed on various viscoelastic modeling of soft tissues, such as linear, nonlinear and quasi-linear viscoelastic modelings. A viscoelastic model based on mixture theory, such as biphasic poroelastic model and biphasic poroviscoelastic model is also introduced. The models are studied mostly using typical simple loading conditions. They include creep, stress relaxation, and cyclic loading of such models.

639 Advanced Finite Element Methods (3)

Staff

Prerequisite: BMEN 636

This is the second course in finite element analysis that expands upon the introductory course, BMEN 636. Included in the topics to be addressed are the theory and application of weighted residual methods, dynamic mode shape and time series analyses, geometric and material nonlinearities, contact problems, and thermal and electric field problems. The BMEN Origin 2000 is used for running ABAQUS and/or ABAQUS/EXPLICIT to solve all application problems.

664 Bone Mechanics (3)

Staff

Prerequisite: BMEN 636 and approval of instructor

The objective of the course is to provide students with an opportunity to pursue an in-depth examination into current methods and results in bone mechanics research. Of particular interest is the study of the anatomy and physiology of bone tissue, the stress-strain behavior of cortical and cancellous bone, the fatigue behavior of bone, and the response of living bone to disease, foreign materials, and to mechanical loading. Both the methods and the results of bone mechanics research are studied, and computer simulations of bone adaptation to mechanical loads are performed.

665 Structure-Function Relationships in Biological Tissues (3)

Staff

Prerequisites: BMEN 634 or ENGR/BMEN 631

This course provides a review of the mechanics of finitely deformable structures and thermomechanics with applications to the study of biological tissues. The focus of the course is on the development of mathematical models describing fluid-solid interactions in biological tissues, nutrient transport, damage repair, and discontinuities. In particular, we cover mixture theory, poroelasticity, microstructural models of cortical and cancellous bone, tendon, ligament, and other tissues, transient and steady-state nutrient transport, and continuum damage theories.

667 Pulmonary Mechanics (3)

Prof. Gaver

Prerequisites: MATH 224, BMEN 633 or equivalent

This is a survey course in which mechanical models of the pulmonary system are discussed. Topics to be addressed include mucous transport, airflow/diffusion in the pulmonary airways, ventilation/perfusion relationships, flow through collapsible airways and interfacial phenomena.

668 Orthopaedic Bioengineering (3)

Prof. Anderson

Prerequisites: ENGR 241, ENGR 243, ENGR 312

Concentration on various engineering aspects of the human knee and the treatment of its common orthopaedic pathologies. Topics include histophysiology of wound healing, synovial joint anatomy and tissue biomechanics, knee biomechanics, osteochondral and ligamentous graft reconstruction, prosthetic ligaments, and knee arthroplasty with emphasis on the design issues involved and the integration of clinical practice.

681 Advanced Mathematics (3)

Staff

Prerequisite: MATH 221, MATH 224

Vector-field theory including line, surface and volume integrals. Divergence, Green's and Stokes' theorems. Complex variables. Delta functions. Fourier transforms. Partial differential equations. Solution of inhomogeneous equations using Green's functions. Applications to electromagnetics, fluid and solid mechanics.

741 Research Methods (3)

Prof. Rice

Methods and resources for experimental studies in engineering science are introduced. Topics include the nature of scientific inquiry, literature search and writing techniques, experimental design and control, data analysis and presentation, and statistical methods. An original proposal is required.
