1. Given the following variance-covariance matrix for a repeated measures design with 3 levels of the within factor, show how you would find epsilon using the Box/Geisser-Greenhouse formula

## Correlations

|  |  | SCORE 1 | SCORE 2 | SCORE 3 |
| :---: | :---: | :---: | :---: | :---: |
| SCORE_1 | Pearson Correlation | 1.000 | $619^{*}$ | 666* |
|  | Sig. (2-tailed) |  | . 000 | . 000 |
|  | Sum of Squares and Cross-products | 312.222 | 153.222 | 184.444 |
|  | Covariance | 8.921 | 4.378 | 5.270 |
|  | N | 36 | 36 | 36 |
| SCORE_2 | Pearson Correlation | .619* | 1.000 | . 152 |
|  | Sig. (2-tailed) | . 000 |  | . 375 |
|  | Sum of Squares and Cross-products | 153.222 | 196.222 | 33.444 |
|  | Covariance | 4.378 | 5.606 | . 956 |
|  | N | 36 | 36 | 36 |
| SCORE_3 | Pearson Correlation | . $666^{*}$ | 152 | 1.000 |
|  | Sig. (2-tailed) | . 000 | . 375 |  |
|  | Sum of Squares and | 184.444 | 33.444 | 245.639 |
|  | Cross-products |  |  |  |
|  | Covariance N | $\begin{array}{r}5.270 \\ 36 \\ \hline\end{array}$ | $\begin{array}{r}.956 \\ 36 \\ \hline\end{array}$ | $\begin{array}{r}7.018 \\ \hline 36 \\ \hline\end{array}$ |

**. Correlation is significant at the 0.01 level ( 2 -tailed).

The answer without conducting any arithmetic would be:
$\mathrm{s}_{\mathrm{ij}}$ mean of the diagonals is $(8.921+5.606+7.018) / 3$
s mean of the entire matrix is $(8.921+4.378+5.270+4.378+5.606+.956+5.27+.956+7.018) / 9$ $\sum \mathrm{s}_{\mathrm{jk}}{ }^{2}$ sum of all squared entries is

$$
8.921^{2}+4.378^{2}+5.270^{2}+4.378^{2}+5.606^{2}+.956^{2}+5.27^{2}+.956^{2}+7.018^{2}
$$

$\sum \mathrm{s}^{2}{ }_{j}$ sum of squared row totals is

$$
\begin{aligned}
& {[(8.921+4.378+5.270) / 3]^{2}+[(4.378+5.606-+.956) / 3]^{2}+[(5.27+.956+7.018) / 3]^{2}} \\
& \varepsilon=\left[3^{2}\left(s_{\mathrm{ij}}-\mathrm{s}\right)^{2}\right] /\left[(3-1)\left(\sum \mathrm{s}_{\mathrm{jk}}{ }^{2}-(2)(3) \sum \mathrm{s}^{2}{ }_{\mathrm{j}}+3^{2} \mathrm{~s}^{2}\right)\right]
\end{aligned}
$$
