

Dr. Wimley's Evaluation. Please take a few minutes to help me and to help future students. You can print this form and write your answers on it. Or prepare an answer sheet (with question numbers) and print your answers. Please return during class. Get them to me through campus mail if you want to be anonymous. Drop in my mailbox (Room 6148), or drop in any Campus mailbox with the address on the back of the third page showing. No stamp required. Or slide it under my door (Rm 6032). (I don't usually arrive until after 8:30).

My goal in teaching is to educate Tulane biomedical graduate students so that they know protein biochemistry well enough to understand scientific discussions, seminars and papers from the literature. The purpose of this evaluation is for me to improve my portion of Biochemistry 601. Negative comments are sometimes more helpful than positive comments. Every year I do make changes to my lectures in response to these comment sheets.

http://www.tulane.edu/~biochem/lecture/601/wimley_evaluation.doc

1) Is there too much material? Would it improve the education of future students to simplify the lectures and remove some material?

2) List some subjects that you think should be removed/de-emphasized in the Wimley portion of class.

3) List some subjects you think should have MORE emphasis in the Wimley portion of Biochem.

4) Which subjects did you have the most difficulty understanding?

5) What can I do to teach these subjects better?

6) Which aspects of my lecture handouts could be improved? How?

7) How can my lecture delivery in class be improved?

8) Are there any subject areas that you think I should have covered, but did not?

9) Do I cover material too fast or too slow?

10) Do I assume too little or too much prior knowledge?

11) What were the subject areas that you felt I assumed too much prior knowledge (math, thermodynamics, organic chemistry, cell biology...all of the above?).

12) Was most of the material review, or was most of it new? Was the depth of coverage greater or less than you've had before?

13) Do you feel like you know how to study effectively for my material?

14) How much did the textbook help you to learn the material?

15) Were the previous test questions I handed out helpful in your preparation?

16) Any other comments?? Express yourself.
