

REPORT

OF THE

BOARD OF ADMINISTRATORS

OF THE

CHARITY HOSPITAL

TO THE

LIBRARY OF THE
Orleans Parish Medical Society

GENERAL ASSEMBLY OF THE
STATE OF LOUISIANA

1926-1929

NEW ORLEANS, LOUISIANA

Marble Tablets in Main Hall of Hospital

THE
CHARITY HOSPITAL
OF LOUISIANA

WAS FOUNDED IN THE YEAR 1786

BY

DON ANDRES ALMONASTER Y ROJAS,

To whose generous endowment, the munificence of the

LEGISLATURE OF THIS STATE,

and the liberality of the State of Pennsylvania, the community is indebted for the means of erecting this edifice, built in the year

1832

His Excellency A. B. Roman, being Governor and Ex-Officio
President of the Institution.

To record which and inscribe hereon the names and contributions of its distinguished benefactors
THIS TABLET HAS BEEN ERECTED

Form of Gift or Bequest

I give (or bequeath) to the Charity Hospital, New Orleans, an institution established under the laws of the State of Louisiana, the sum of

_____ Dollars
to establish an "Endowment Fund".

It is agreed that this fund is to be judiciously invested and the revenue therefrom applied solely to charitable work in said institution.

Adopted July 19th, 1926

The Board of Administrators of the Charity Hospital of Louisiana, New Orleans, does hereby agree and bind itself and its successors in office as a condition precedent to the receipt of donations or bequests to the "Endowment Fund", to put aside unimpaired in perpetuity and invest said funds, and keep same perpetually invested in high grade bonds or other interest bearing securities, and the interest earned thereon to be dedicated and used exclusively for the furtherance of its charitable work.

Furthermore, that any donation or bequest of Five Hundred Dollars (\$500.00) or more, the donor's name be inscribed upon the tablet in the Main Building and a plate bearing the Donor's name be placed on a bed in a designated ward.

ANNUAL REPORT OF THE VICE-PRESIDENT

FRED. W. EVANS

February 21st, 1927.

Governor O. H. Simpson, Ex-Officio President, Board of Administrators, Charity Hospital, New Orleans, Louisiana.

My Dear Governor:

The report of the Board of Administrators of Charity Hospital for 1926 will reveal the fact that last year was the most active one in its history, and it is felt that the hospital has again rendered a most efficient service to the citizens of this City and State who were in need of medical and surgical attention.

The per capita cost of \$1.70 per day, while an increase over last year, is very low as compared with other hospitals.

The scope of usefulness has been extended, until now Charity Hospital, with its 1,551 beds, compares in size to the four or five largest hospitals in the United States.

In submitting this report, it is the intention to give briefly only a summary of the important events of the year, for the report of the Superintendent covers in detail the entire activities of that period.

It is pleasing to report that the Legislature of 1926 increased the annual appropriation for maintenance for the biennial period July 1, 1926, to June 30th, 1928, ten per cent over the previous appropriation. In addition thereto, a special appropriation of \$142,000.00 was made to partially reimburse special funds which had been exhausted to purchase a square on Claiborne Avenue for the Dibert Tuberculosis Hospital. An appropriation was also made for an additional Nurses' Home and a new Internes' Home, amounting to \$200,000.00.

This sum was not sufficient to build both, so the Board, believing the home for internes a more urgent need at this time, proceeded along those lines. Plans and specifications have been made, and bids are being advertised for at present.

It is hoped the next Legislature will find the necessary funds to add to the amount left from this \$200,000.00, to build the home for nurses. This is an absolute necessity, for at present some of the nurses are required to stay on the fourth floor of one of the buildings for patients. This is contrary to what should be, and but for the fact that it is a temporary measure, the Training School could not be rated as Class "A."

The Dibert Building for tubercular patients, donated by Mrs. John Dibert, at a cost of \$450,692.26, has been completed and will receive patients about the first of March. Mrs. Dibert, by this generous gift, will be the cause of relieving thousands of patients suffering from tuberculosis.

The McBurney estate has been settled and the property bequeathed to Charity Hospital is valued in excess of one-half million dollars. The interest from this fund must be used only for the maintenance of a tuberculosis hospital.

Mrs. Dibert has made another handsome gift to the hospital. She is building a home for the Sisters of Charity, which will cost in the neighborhood of \$175,000.00.

These last gifts exceed a million dollars, and illustrate clearly the high esteem held for the hospital.

By a resolution of the Board of Administrators, an endowment fund was established. It is the belief that in time this fund will grow to such proportions as

to be of material benefit to the institution. The first subscription was made by Mr. and Mrs. R. B. Roessle, in commemoration of their little girl, Adele Emily, who always showed a keen interest in the little unfortunate children in the Milliken Hospital.

It is again reported that Charity Hospital continues to remain Class "A" on the approved list of the American College of Surgeons.

The Advisory Committee, composed of members of the Visiting Staff, has been of material assistance to the Board in problems of a medical nature, and I am appreciative of the co-operation extended.

The Visiting Staff, which numbers among its personnel some of the most eminent men in the profession, has rendered an invaluable service to the patients.

I cannot praise too highly the executive skill and business judgment of Dr. Wm. W. Leake, the Superintendent, and the painstaking care of Mr. Fred W. Matthews, Secretary-Treasurer.

The Sisters of Charity, as always with their labor of love, have been of great assistance to the hospital authorities, and their devoted attention to the sick has been a means of relieving much suffering.

In conclusion, permit me to state that your Board met regularly, and every member always displayed a keen interest in every matter pertaining to the hospital. The co-operation from each one individually, and from the Board collectively, made possible the achievements accomplished.

Yours respectfully,

F. W. EVANS,

Vice-President.

*This Building Erected in 1926
Gift of MRS. JOHN DIBERT*

SUPERINTENDENT'S REPORTS

February 21st, 1927.

Honorable Board of Administrators, Charity Hospital, New Orleans, Louisiana.

Gentlemen:

Reviewing the work of Charity Hospital for the year 1926, one is amazed at the great improvements that have taken place and the seemingly endless activities of this enormous institution.

Each year appears to surpass the previous one, and the year just ended is no exception.

The completion of the Dibert Tuberculosis Hospital, at a cost of \$450,692.26, is the outstanding achievement and one that will always hold Mrs. John Dibert dear to Charity Hospital.

This modern, up-to-date building of two hundred and fifty bed capacity, is a complete hospital unit, fully equipped and capable of caring for, in an efficient manner, the unfortunates who are afflicted with that malady.

There is no separate X-Ray unit, but the building is so wired that a portable machine can take pictures of all who are unable to be transported to the Main Laboratory. There is a complete operating room, dental rooms and pathological laboratory that will serve only the patients in that department.

A complete kitchen, costing in the neighborhood of \$9,000.00, makes it possible to segregate that building from all others. The entire equipment will cost about \$25,000.00. This low figure was made possible by competitive bids on every article furnished. It is intended to keep the cost of maintenance entirely separate from the rest of the hospital.

Mrs. Dibert, the donor of this building, has made another most munificent gift to the hospital. She has decided to build a home for the Sisters of Charity at a cost of \$175,000.00. This building will parallel the Dibert Building, along Claiborne Avenue, and will serve a most noble purpose. The present Sisters' Building was constructed in 1848, and is now barely habitable.

As badly as this home was needed, I fear it would have been many years before the State could have found the funds; for other pressing needs of the hospital, of necessity, would have taken precedence, especially room for patients, for it becomes necessary at times to place two in a bed.

This last gift of Mrs. Dibert makes her by far the largest donor to the hospital and by her noble generosity and philanthropy, she has won the everlasting gratitude of the hospital, and of the people of Louisiana.

Another great achievement of the year was the securing of funds for the building of an Internes' Home. For these funds we are thankful to our good State. Plans and specifications have been completed and soon actual work will be started and this modern home will cost approximately \$175,000.00. This will fulfill a much needed improvement, for the present building is absolutely inadequate and obsolete. In addition to the present quarters, internes are housed in the hospital proper and are lodged in a home seven blocks away. It is not necessary to emphasize the difficulty in hospital administration by such an arrangement.

At present there are about fifty internes. This new home will have accommodations for seventy, which will anticipate the needs for many years to come. There will be ample space for a library, recreation and reception rooms, which will give the building a homelike atmosphere. This will give the internes a home to be proud of and make their home life entirely comfortable.

So far much has been said for improvements, but let us not forget that there is yet much to be done, and let us be frank and admit that lacking these needed

improvements we are not doing the best possible for our patients at all times.

A year ago it was brought to your attention that this condition was due primarily to lack of internes, and lack of nurses, and the crowded condition of patients. The building of a home for internes will put aside for all time the shortage of internes.

Lack of nurses is due to two causes: inadequate dormitory facilities and consequent inability to secure the necessary number.

The building of an adequate Nurses' Home is of prime importance and efforts should never cease until the mark is accomplished. When this is done, every means should be used to enroll the requisite number, for without sufficient nurses proper care of the patients is impossible.

During the year, the Louisiana Board of Nurses Examiners, through their Secretary, attempted to raise the entrance admission of nurses from two years' high school to high school graduate. This hospital is as anxious as any to raise the standard of nursing and will do everything in its power toward that end, but this arbitrary and precipitate attempt, without conference with all superintendents throughout the State, to put such a measure into effect, met with vigorous protest from Charity Hospital and the suggestion was defeated. As a matter of fact more than 32% of Charity Hospital nurses are high school graduates and quite a few have college units.

It is interesting to note that 84% of Nursing Schools throughout the United States require only two years' high school education for entrance.

Unfortunately the crowded condition of patients exists and the abominable practice of placing two patients in a bed is necessary, although to a lesser degree.

A study of the accompanying statistical report reveals the fact that the hospital cared for more patients, both in the hospital and in the out-door clinics, than ever before in its history. With the increase every year, additional hospital beds are required.

Plans for a greater hospital were made several years ago and it is hoped that at least the first unit of the proposed plan can be realized at an early date. Until this is done, the request is reiterated that admission be refused patients in excess of beds unless the exigency of the cases requires admission.

The per capita cost of the hospital for 1926 is \$1.70 for inside patients and \$.26½ for the out-door department. This is an increase over the previous year which was \$1.53½ for inside patients and \$.24 for the out-door patients. This increase is explained in several ways. First, it is believed that better care was rendered patients, as is shown by a substantial increase in the cost for the professional care of patients. Department expenses also increased, particularly in the steward's department.

Under the item General House and Property Expense there was an increase from \$106,000.00 to \$137,000.00, which was caused principally by the complete renovation of the Main Building and the old White Female Building, together with the general improvements throughout the hospital. All this is classed under maintenance and is included in the per capita cost of the patients.

No apology is offered for this increase, for as a matter of fact the hospital should hope some day to see the per capita cost in excess of \$2.00.

The hospital authorities who visit us from time to time always express amazement at our low per capita. When the per capita cost of Charity Hospital will range from \$2.50 to \$3.00 per patient, it will be comparable with other similar institutions, and then we may hope to feel that our patients are being cared for in a satisfactory manner.

The Board of Administrators, acting as a Committee, visited Baton Rouge several times during the year, especially during the session of the Legislature.

The Louisiana Tax Commission, the Appropriation Committee, and the Legislature as a whole, as well as the Governor, while not giving the entire amount asked for, favored us with a substantial increase, both for maintenance and improvements, which was the cause of the hospital functioning in a more satisfactory manner.

In the way of improvements, an amount was asked for which would have been sufficient to build both an Internes' Home and a Nurses' Home. The amount appropriated was not sufficient for both, but was more than was needed for one. The Administrators believing the building of an Internes' Home a more urgent need proceeded along these lines. It is hoped that the next Legislature will find sufficient means to build a Nurses' Home, which is certainly an urgent necessity.

Those interested in the hospital will be glad to know of the many improvements made during the year, but space will not permit the giving of all these in detail.

The outstanding improvements, however, that are worthy of note, may be mentioned as follows:

The erection of the new transformer house for the distribution of light and power to the various buildings. These transformers at present care for the Dibert Building, Unit No. 1, and will eventually be the distributing point of electrical power for all the hospital buildings.

The complete renovation of the Main Building was made and the changes brought a complete metamorphosis. The third floor which for years back had had colored male patients was changed, and white female patients were placed there instead.

With the removal of colored males from this building, this old Main Building which was erected in 1832 is now used for white patients only.

The White Female Building was thoroughly renovated and is now used exclusively for colored males. The white female patients who were formerly cared for there were removed to the new unit, Delgado Building, third floor of the Main Building and one floor in the Milliken Building.

In the renovating of the two buildings just mentioned, many new dressing rooms were installed and increased toilet facilities were made on the first and third floors of the present colored male building. The old system of having chart boards and medicine cases in the wards has been discontinued and each ward is equipped with a chart desk located in the hall.

All medicine cases are now situated in the corridors and wherever possible, are built in. This improvement is general throughout all the buildings in the hospital and makes it possible to render much better service to the patients.

In changing the colored male patients from the Main Building to the building along Gravier Street, an improvement was brought about whereby all colored patients were segregated in two buildings, the Breaux Building and Contagious Building excepted.

A new ward was made on the first floor of the Milliken Building which was formerly used as sleeping quarters. It is now used for the admission of white female ear, nose and throat cases. Electric bed signals and all standard hospital equipment have been installed in this ward.

A new $1\frac{1}{4}$ hexagon tile floor was installed in Ward 67 in the Delgado. This is used for the segregation of white male patients suffering from cancer of the face.

The third floor of the Delgado Building, formerly a white male surgical department, was thoroughly renovated and painted and changed into a white female surgical and gynecological department. All toilets, baths, and lavatories were changed to suit the service.

During the year the fracture service was increased and all wards were fitted with permanent Balkan frames, which consist of metal tubing and portable poles. These were substituted for the wooden frames and give to the ward a decidedly neater appearance.

The old circular stairway in the laundry was in a bad state of decay, and was found to be unsafe. It was removed and a new one placed on the outside of the building. The stairwell was then closed, lathed and plastered and the entire laundry plant given two coats of paint. This enhanced the appearance of the laundry considerably.

It is pleasing to report that all mechanical equipment in the laundry is in good repair and the work is turned out with promptness and dispatch. The new buildings, with increased patients and personnel, are putting a severe test on the present equipment, but it is the intention that no additional machinery will be purchased until it becomes absolutely necessary.

With the completion of the Dibert Building and the extension of steam, water and electric lines, it was found that an entire rearrangement of the above was necessary, as the lines formerly used were too small for making the necessary extensions. A new and larger trench of concrete construction was laid from the Morgue to the Dibert Building, a distance of 560 feet. This trench is 48 inches wide with 4 inch walls and a 4 inch bottom, and equipped with one inch pipe supports every six feet. The covering is concrete and used as a walkway. The trench is now of sufficient size to care for all the present buildings in that vicinity and those that may be constructed in the near future.

Connections have been made with the Female Dormitory, Milliken, Delgado and Nurses' Home, the main route being to the Dibert Building. Extensions can be made to the Sisters' Home which is under course of construction and also to the new Nurses' Home, which it is hoped will be built soon.

The lines for the cold water supply were also extended and outlets were left for the fire hydrants that will be eventually installed in the grounds adjacent to the Dibert Building and Sisters' Building.

All of the equipment in the power house is in good condition and operating satisfactorily. The boilers and settings, however, are still registering a slight amount of settling.

During 1926, Unit No. 1 was completed which is supplied from the Main Power House. The Dibert Building is now completed and within the year the Internes' Home and Sisters' Home will be completed. The present load is carried on two 150 H. P. boilers operating at about 80% above rating. These boilers during the winter months develop 540 H. P. during the day. On very cold days it is necessary to use three of the four boilers. When the buildings above mentioned have been completed it will be necessary to use constantly during the winter months, three of the boilers and sometimes four, about 90% above rating. This leaves only one boiler as a spare, so that in a very short time it will be necessary to install one or two new boilers, for any shut down of the steam system would cause much suffering and cripple the hospital considerably.

During the year thirty-nine chart desks, nineteen medicine cases, twelve chart cabinets, and thirty tables of various sizes were made and installed throughout the wards in the hospital.

Many new window screens, the full size of the openings, were made and substituted for the half screen windows that were in need of repair. The screens were made from selected cypress and covered with Monel screen wire. It is the intention eventually to replace all one-half screens with full screens which will give a much more satisfactory service.

The painters have cared for all the glazing, varnishing of furniture, painting the interior and exterior of buildings, beds, bed screens and household furniture.

The entire interior of the Colored Male, the entire interior of the Main Building, porches, the second, third and fourth floors of the Delgado Building, the Admitting Room, the Laundry, the Diet Kitchen, Sisters' refectory, and halls, dining-rooms in the basement of Milliken, bedrooms of the House Staff, second and third floors of the Ambulance House, and Miles Amphitheatre were painted. Also, 454 lights of glass were installed.

In addition to the work on roofs and gutters by the tin and coppersmiths, there were made ten instrument sterilizers, and numerous other utensil sterilizers.

Exclusive of the above, the Engineering Department has responded to 7,921 calls for repairs on steam, water, gas, and electrical apparatus.

During the year, 9,431 cans of ice, totalling 1,868.20 tons, were manufactured at a cost of \$1.99 per ton. This is about the capacity of the present plant. With the opening of the Dibert Building, it will be necessary to manufacture many more tons. This increase can be met by the present machinery, but the ice tanks will have to be increased by fifty more cans, of four hundred pounds each. The present location offers very little room for expansion, which makes this more or less a difficult problem.

During the year, there were received sixty-four cars of oil, or a total of 16,764 barrels. Of this amount, 15,964 were consumed. The oil consumption is increasing every year. This is explained by the erection of additional buildings and the increased demand for steam throughout the hospital for sterilization and steam appliances.

The total electric current consumption for light and power used in all of the buildings was 7,657.30 K. W. H. at a cost of \$13,919.00, at the rate of \$.018 per K. W. H.

The ambulances have given unusually good service considering the age of these machines. They have been kept in commission twenty-four hours of the day and at no time has more than one ambulance been out of commission. The machines are old and require constant attention and the cost of maintenance is excessive. It is hoped that new ambulances may be purchased in the near future, if the good service is to be continued. Only the skill and efficiency of the auto mechanic has made it possible to get the service that has been given. These machines responded to 4,307 calls, totalling 19,102 miles, the average consumption of gas being about five or six miles per gallon.

Plans and specifications have been completed for the building of an underground tunnel from the Dibert Building to the space between the Delgado and Milliken Buildings, also, a branch to the Nurses' Home. It is hoped funds will soon be available for this improvement, as such a tunnel would prove of real service to patients and others going to these buildings. Later, connections could be made with the new unit and other buildings that may be constructed in the future.

The covered passage from the entrance on Tulane Avenue to the Main Building, connecting the two administration buildings, has been completed. An information booth has been installed. This will be used to register the Visiting Staff and give the necessary information to visitors.

With the growth of the Physicaltherapy Department, it was necessary to seek additional room. Consequently, this department was moved from the Main Building to the basement of the new unit. In this basement, hollow tile partitions were erected subdividing the entire space into the necessary rooms. The same construction was carried out as in the other parts of the building. This department will now have adequate space, and with the separate waiting rooms, a much more effective arrangement is made. This is a useful and very effective means of treating some of the obstinate joint conditions and is serving a real benefit to the patients. It is hoped that much new equipment can be purchased in the near future.

The Metabolic Department has also been moved from the Main Building to this basement, which gives much more comfortable quarters. The space has been so allotted that the patients can have absolute quiet which is so necessary for accurate readings.

The hospital was fortunate during the year in securing an electrocardiograph. This was made possible through the efforts of Dr. E. Denegre Martin in behalf of the Tulane Postgraduate School of Medicine. The machine is a Hindle of the latest type, and is rendering much useful information to the Visiting Staff in making curve readings of the heart. The machine was installed under the direction of Dr. George Herrmann, who has rendered invaluable service.

This department was housed temporarily in old Ward 10, but at the present time the space formerly occupied by the Physicaltherapy Department is being thoroughly renovated and when completed will receive this machine. Dark rooms are being installed so that this department will be a complete unit in itself.

It is expected the special heart clinic will be opened within the next week or two.

A library for the Visiting Staff and Internes was started during the year, the temporary domicile being the Doctors' Reception Room. Donations from many of the doctors and especially a large contribution from the Orleans Parish Medical Society made this possible. Book cases and shelves were installed by the hospital cabinet makers. This library now boasts of 500 volumes and has many of the current periodicals on file. The advantage of the opening of this library is evident.

Dr. S. B. McNair, the President of the Interne Corps, deserves probably more credit than anyone else. His perseverance, enthusiasm, and untiring determination more than any other factor made this accomplishment possible.

A new rule was made for the admission of visitors. Those visiting the colored buildings are required to enter through Gravier Street. The paving of this street and the building of a covered passageway made this entrance very convenient. A protest was made to the Board of Administrators by some of the colored leaders of the City, who stated that some discrimination was being made by not permitting a majority of colored visitors to enter through Tulane Avenue. The Board realizing how much this change facilitated hospital administration denied the protest. The colored patients themselves welcomed the change and it is a fact that 1926 found conditions more crowded in the colored department than ever, although considerable colored beds were added.

At all times during the year there were two in a bed in some of the wards and in a few instances almost the impossible was accomplished by placing three adults in a bed.

Through the co-operation of Commissioner John Klorer and the Parking Commission, arrangements have been completed for the creating of parking space along Tulane Avenue. The grass part of the sidewalk will be used for this purpose. This should prove of real benefit and should materially facilitate traffic on Tulane Avenue.

The revenue received by the hospital from compensation cases was increased. The employment of Mr. Emmet Alpha, Special Counsel, to investigate delinquent cases has been partly responsible for this improvement.

Circular letters were sent to all Steamboat and Steamship Companies advising that when they called for the ambulance for any of their injured employees, they would be held responsible for payment.

It will be necessary for the present carpenter and paint shops to be moved from their present location, as the new Internes' Home will be erected on that site. Two pieces of property were purchased on LaSalle Street and the new shops are under course of construction. The new arrangement will place the entire maintenance division of the Engineering Department in one location and will be a means of serving more efficiently the needs of the hospital. It will eliminate the crossing of Tulane Avenue, which is not only dangerous, but also the loss of much time.

All employees are carefully checked in and out on coming to and from the hospital. Two entrances are used for this purpose and no confusion experienced.

The hospital continues to suffer from the soot and cinders from the gas plant. The nuisance has become so great that it is a menace to the welfare of the patients. An interview held with the Board of Directors of the Public Service Company gives promise of relief to the hospital in the near future. It is their intention to install special equipment on the thirteen separate generators, which they claim is the cause of our discomfort.

The filling of the hospital cemetery has been completed and the work of grading is now under way. There will be a roadway of twelve feet down the center topped with gravel. Bermuda grass will be planted throughout, with trees along

the roadway. This should give the cemetery a very pleasing appearance in contrast with the unsatisfactory condition that formerly existed.

It is indeed gratifying to report that your Superintendent has again received unlimited support and entire co-operation from all departments of the hospital. This spirit of harmony has been the principal reason for the success attained during the year, and without which proper functioning of the hospital would have been impossible.

At the annual meeting of the Visiting Staff held last October a new Advisory Committee was elected. The newly elected officers are: Dr. B. A. Ledbetter, President; Dr. Lucien Landry, Vice-President; Dr. A. Mogabgab, Secretary; and four additional members, Dr. A. E. Fossier, Dr. Paul Gelpi, Dr. Chaille Jamison, and Dr. H. W. Kostmayer.

The Superintendent has enjoyed the confidence and full co-operation of this Committee, and he desires to express thanks and appreciation for the assistance given.

The Visiting Staff has rendered an invaluable service to the patients, and the Hospital is appreciative of the skillful and tender services given.

Charity Hospital is to be congratulated in having men of such eminence on its staff and the patients here receive the skill and attention equal to that of any hospital in the country. The State of Louisiana should be proud, for the work of this hospital is known throughout the United States.

The personnel of the House Staff consists of Dr. M. O. Miller, Senior Surgeon; Dr. Wm. H. Cook, Junior Surgeon; Dr. J. G. Snelling, Assistant House Surgeon; Dr. Philip H. Jones, Jr., Senior Medical Officer, and Dr. M. W. Hunter, Junior Medical Officer. These officers have been loyal and diligent in the performance of their duties, and have co-operated in every way with the Superintendent.

Charity Hospital has again received many applications for internes and the selection of these has been made for service beginning July 1st. The present corps is rendering an entirely satisfactory service and the Superintendent takes this means of expressing his gratitude for their assistance.

As usual full praise should be extended to the Sisters of Charity for their sympathetic attention to the patients.

Sister Stanislaus, the Superior, by her many timely suggestions, has been of material aid in making the administration, during the past year, a success. Her co-operation was genuine and sincere and to her the hospital is indeed grateful. Special mention should be given to Sister Aloysius, who for forty-seven years has served faithfully the hospital at night. One would go far to find the equal of this faithfulness. Certainly she is deserving of any reward that may be her fortune to receive.

The knowledge that a new home for the Sisters will be built during the year will be received with much rejoicing by the whole hospital.

The hospital is grateful for the services rendered by the nurses. With considerably more patients treated, with no corresponding increase in the number of nurses, they were forced to give beyond what is normally expected. Every endeavor will be made to give them a new home with modern conveniences as soon as possible and every available means will be used to secure additional numbers so that the burden of each may be lessened. As much relief has been given as possible and recreation has not been overlooked.

The training school under the able management of Sister Kostka has made satisfactory progress, and today the graduates of this hospital compare favorably with any institution.

Last May, thirty-eight nurses were graduated, the exercises being held in the Elks' Home. Among the graduates was Miss Marcelle Dansereau, who attained the highest average of any pupil in school. She also made the highest grade ever

passed in the Louisiana State Board of Examiners. She won the scholarship for advanced training and is now receiving instruction at Vanderbilt University. Upon completion of this course, she will be returned to Charity Hospital and will join the rank of instructors.

The Pathological Department was reorganized and with the addition of an all-time pathologist the efficiency of that department has been increased.

The X-Ray Department is again serving efficiently and is rendering valuable service. It is gratifying to announce that Dr. Amedee Granger, the Director, was the recipient of a gold medal given him by the Radiological Society for his distinguished work on the sinuses.

The Radiotherapeutist by the administration of radium has again been the cause of decreasing materially the stay day per patient of those suffering from cancer. Many inoperable cases have been benefited and relieved to such an extent that they were permitted to go home.

The Chief Engineer, Mr. John V. Ponder, has again rendered very efficient service. Each department head under him has been untiring in the desire to do a greater work.

The Purchasing Department, under the efficient handling of Mr. Henry Weimann, has again functioned in a most satisfactory manner.

The Social Service Department has been handicapped by lack of workers and can only function properly when the budget for that department is increased sufficiently to give the necessary personnel.

The Out-door Department, although increasing in size each year, continues to give satisfactory service to the patients who apply there for treatment.

Sister Gonzaga, who directs the Department of Dietetics, continues to render efficient service to those patients in need of special scientific diets.

The Record Room, under the able supervision of Dr. G. Farrar Patton, is functioning to the satisfaction of all. During the year there were 27,498 histories filed and requests for 5,264 histories to be reviewed.

The last session of the Legislature passed a Hospital Abuse Bill, which makes it a misdemeanor for those able to pay to receive free treatment at the hospital. A questionnaire is filled out and every patient made to sign before admittance to the hospital, emergencies excepted.

Through the efforts of Mrs. Geo. Q. Whitney, Mrs. Lucien E. Lyons, and Miss Emma Glenny, a memorial tablet for Mr. William E. Stauffer was placed in the hall of the Main Building. Mr. Stauffer, a former member of the Board of Administrators, was always interested in hospital affairs. He was the founder of the Social Service Department and always prominent in hospital activities.

Insurance on the hospital was increased from \$2,000,000.00 to \$3,000,000.00. A complete inventory is being made of all hospital equipment which will be the means of determining the true physical value of the hospital.

The Junior League donated a quartz lamp to the hospital to be used in the Milliken Building for children. The lamp is proving of material benefit and the gift is greatly appreciated.

A hospital endowment fund was created during the year. Anyone giving at least \$500.00 is entitled to special recognition. The funds will be kept in perpetuity for the endowment of a hospital bed. Mr. and Mrs. R. B. Roessle established the first bed in memory of their little daughter.

At Christmas time the children of the Milliken were made happy by the annual Christmas tree furnished by the Elks. A real entertainment was staged by the talented juveniles of the city, which gave enjoyment to the little afflicted children. In addition, each patient in the hospital was made the recipient of some gift. The hospital is deeply appreciative of this generosity on the part of the Elks.

The hospital was saddened on several occasions by the death of those who were held dear in the hearts of all.

Governor
Henry Luce Ingham

Ex-Officio President
BOARD OF ADMINISTRATORS
CHARITY HOSPITAL,
NEW ORLEANS  LOUISIANA

Died Monday, eleventh day of October
Nineteen hundred twenty-six

His advocacy of constructive principles
and policies as ~~Chief Executive~~ of our
State, together with the oft expressed desire
for peace and harmony in his administration,
was the guiding influence that characterized him;

" If I am right, Thy Grace impart
Still in the right to stay;
If I am wrong, teach my heart
To find that better way. "

Unanimously adopted at meeting of the Board,
New Orleans, Monday, October 18, 1926; in-
scribed on page in the minutes, and a copy
sent to his family

J. W. Edwards
Geo. L. Lewis
J. H. Bell, M.D.
C. A. G. Smith
J. A. Lamine
VICE-PRESIDENT

W. H. W. M. D.
Schaeffer
J. H. Bell
C. W. Matthews
SUPERINTENDENT
SECRETARY - TREASURER

The death of Governor Henry L. Fuqua, which occurred October 11th, 1926, was a severe shock and blow. He was a man held in the highest esteem and of lovable character, and his loss will be keenly felt. The welfare of the hospital was always of interest to him and he was ever ready to share its burdens.

The hospital also lost by death the valued services of Dr. Hamilton P. Jones, Dr. John F. Oechsner and Dr. A. Nelken. These men were eminent in their profession, and served the hospital continuously for many years. Fame of the hospital is reflected from the services of such distinguished men.

The death of Sister Vincentia, who was in charge of the Delgado Operating Rooms, was a distinct loss. She possessed that rare combination of efficiency associated with a pleasing and genial amiability. Her many lovable traits endeared her to all and she will be long remembered.

The Needlework Guild of Charity Hospital established a record in the amount of work accomplished last year. The ladies meeting twice a week made all of the standard surgical dressings used in all departments of the hospital, all sponges for the Operating Rooms in Delgado Building, together with laps, surgeons' masks and perineal pads.

The enthusiasm of the members of this Guild is unlimited and the goal set for 1927 is even greater. Through the President, Mrs. Harry L. Howard, sincere appreciation is extended to the members for the valuable assistance given.

The support and co-operation given the Superintendent by each employee is deeply appreciated and he takes this means of expressing his thanks. Without such loyalty, a successful administration could not be possible.

In conclusion, let me state that words fail to express my full appreciation to the board of Administrators for their unselfish interest in the great work of charity, and for their sympathetic co-operation freely extended at all times. By their united efforts, energy and rare judgment, they have oftentimes made the impossible become possible.

Respectfully submitted,

WM. W. LEAKE, M. D.

SUPERINTENDENT'S REPORT

To the Board of Administrators, Charity Hospital,
New Orleans, Louisiana.

Gentlemen:

Herewith I submit to you my report for the year 1926:

BED CAPACITY

White Male	487	
White Female	484	
Colored Male	234	
Colored Female	222	
Children	124	
Total	1,551	
	White	Colored	Total
General Surgical	268	128	396

GEORGE R. HERRMANN, M. D.

REPORT OF HAY-FEVER AND ASTHMA CLINIC

Service of Dr. Wm. Scheppegrell and Dr. N. F. Thiberge

NEW EXTRACT TESTED

In order to improve the efficiency of the immunizing treatment of hay fever, the Director of the Hygienic Laboratory of the United States Public Health Service at Washington, sent to the Department of Hay Fever and Asthma of the Charity Hospital, a glycerol extract of ragweed for testing on our hay-fever patients. Owing to the wide variation in the various pollen extracts on the market, the Hygienic Laboratory had decided to attempt to devise a method of standardizing these pollen extracts in order that all manufacturers could distribute extracts of known and standardized activity.

Since the ragweed extract is the most important of this group of products, the Hygienic Laboratory selected this extract as the first for which a standard should be produced. They succeeded in preparing an extract which reacted in very high dilutions in the skin of sensitive subjects, fixed complements in high dilutions, and had the distinct advantage of retaining its activity for long periods without measurable deterioration. The protein content to a cubic centimeter of the extract was accurately determined, together with its antigenic value, by means of the complement fixation tests.

After a carefully conducted series of tests, we found that the glycerol extract retained in its concentrated form a degree of efficiency far superior to the aqueous extract. In fact, in testing one of these extracts prepared by the Hygienic Laboratory, which we had kept in our refrigerator for twelve months, it was found to contain at the end of that time almost 100 per cent of its original potency.

Although the glycerol extract retained, in its concentrated form, a high degree of efficiency, this was rapidly lost when weaker solutions were prepared from it. Because of this fact, the dilutions for administration were prepared as they were required, and these were not used more than three days without renewing the supply. The extract furnished by the Hygienic Laboratory was made from mature pollen grains in the proportion of 1 gram to 100 cubic centimeters of extractive fluid, so that each cubic centimeter of the extract contained 10,000 pollen units.

In the season of 1926, one-half of all the cases of fall hay fever were treated with the glycerin extract, and we believe that this was an important factor in the success obtained. Every patient was given the usual diagnostic tests with the various pollen extracts, in order to determine the form and degree of sensitization. These tests were made with the intradermal method, the initial test being made with five per cent dilutions of the extract. We have found the intradermal method the most efficient, but advise the cutaneous method for those who have not had considerable experience with immunological methods.

INTENSIVE IMMUNIZING TREATMENT

The intensive treatment of hay fever, which is limited to the preseasonal form, has given the most gratifying results in the Clinics in the percentage of seasonal cures. In uncomplicated cases, in which the treatment could be carried out without interruption, there were 72 per cent in which the patients were practically free from all symptoms of hay fever, and 23 per cent in which there was marked relief from the attacks, or a total of 95 per cent of favorable results in the cases treated.

The treatment of hay fever is not without its elements of hazard, but this seems not to be especially increased by this method of administration. Physicians who have treated a large number of hay-fever patients by the injection of pollen extracts realize that they are using a method which is not without its risks, and great care should therefore be exercised. During the past season we have had not more than 3 cases of anaphylactic shock in a series of 336 cases, and all of these were promptly relieved by the administration of adrenalin.

In the administration of pollen extracts, special care should be taken to avoid making an injection into a vein. In the case of large doses, such an injection would be followed by an anaphylactic shock of marked and even alarming intensity. This can easily be avoided by withdrawing the piston of the syringe slightly before the injection is made. If blood enters the syringe, the point of the needle is in a vein, and the site of the injection should be changed accordingly. When injections of larger doses are made, the patient is required to remain in the clinic for 30 minutes as a precautionary measure.

REPORT OF DIRECTRESS OF NURSES

To the Honorable Board of Administrators,

Charity Hospital of New Orleans, Louisiana.

Gentlemen:

At the beginning of the New Year, records of the past are balanced with the developing projects of the future, whereby the accomplishments in the columns of 1926 are determined.

The School of Nursing has deviated from the usual plan of instruction by the introduction of the Block System. This method has proved a distinct advantage over the routine of extending the class work over a period of nine months.

Under this System the class-room work is concentrated over a period of three or four months with three class hours and one study period in the afternoon. The students having class leave the wards at one P. M. each day and do not return to ward service that day. When the Senior students complete their course outlined by the National League of Nursing Education, the Juniors' course of study is commenced. Upon completion of the Junior work the Freshmen begin their theoretical course following the same time schedule.

We are pleased to note a marked response to the policy of school publicity, which finds expression in an increase in the number of the incoming classes. One hundred and one students were admitted during 1926, while only fifty-four were entered during 1925. There were three hundred and twenty-three announcements sent to applicants upon request, and four thousand six hundred circulars mailed to Junior and Senior girls in the various High Schools. The withdrawals were less in number than those of the previous year.

While the above statement is encouraging, we are brought face to face with greater demands upon nursing service; first, because of the scientific advance in medicine; secondly, because of the increasing number of departments requiring efficient nursing service, and finally, because of the necessity of educating the student nurse to enable her to fulfil the modern requirements of her profession.

In order that the Hospital may fulfil its obligation to the student nurse, it must provide facilities for equipping her to give the best possible service to the patient. In performing this function, the essentials of a nurse, namely, that she should be equipped to give efficient intelligent bedside care to the sick; that she should have the knowledge and desire in teaching the prevention of disease, and lastly, that she should be fitted to take her place as a useful citizen in the community, have been realized.

The shortage of student nurses has been considered and the Institution has made every attempt to meet the numerous demands upon nursing service by employing more graduate nurses, which means additional cost. It, therefore, becomes evident that more nurses are needed in order to conform to the growth of the Hospital.

Thirteen students were accepted for affiliated courses from two schools within the State and three schools from other States. Six nurses took post-graduate work in general duty.

The general health among the nurses has been good; the most common ailment was tonsillitis, accordingly, a number of tonsilectomies were performed during the year. We report with regret, the sudden death of one of the first-year students.

We are glad to mention the successful publication of a bi-monthly school paper, which has found its way to many High Schools and other parts of the country.

Thirty-eight nurses were presented with diplomas at the commencement exercises of last May. There are thirty students in the present Senior Class.

The Kostmayer Scholarship was won by Miss Marcelle Dansereau, who is also the winner of the 1926 Trained Nurse and Hospital Review Scholarship, and who is now pursuing a college course in Advanced Nursing Education. The honor pin was awarded to Miss Louise Maybeno.

In concluding, this department wishes to express its debt of gratitude to the Board of Administrators for its unwavering support and constant co-operation. Equal thanks are due to Doctor Leake for his wise direction in the consideration of nursing problems and his many courtesies extended to the School of Nursing. The House Officers merit our sincere gratitude for their ready attention to our sick nurses. To our Lecturing Staff, we extend many thanks for their prompt and continued interest manifested in favoring us with the usual lectures. The work of the Graduate Nurse Teaching Staff is to be commended. The Student Body deserves much credit for its devotion to duty.

Respectfully submitted,

SISTER STANISLAUS,

Directress of Nurses.

January 26th, 1927.

Dr. W. W. Leake, Superintendent, Charity Hospital of Louisiana.

Sir:—

We respectfully submit herewith the annual report of the Charity Hospital Out-Patient Department for the year 1926. During the year 58,119 new patients were admitted; the total number of visits to the various departments was 206,845, with the daily average of 676 as shown in the following schedule:

SERVICE	NEW CASES	CONSULTATIONS	TOTAL NO. VISITS 1926	TOTAL NO. VISITS 1925
Fracture	1,170	7,057	8,227	7,103
Surgery	17,480	41,647	59,127	58,902
Medicine	9,061	20,146	29,207	29,898
G. U. for Men and Salvarsan	4,201	20,741	24,942	24,125
G. U. for Women	878	3,462	4,340	3,811
Gynecology	4,096	5,475	9,571	7,885
Obstetrics	1,573	4,526	6,099	5,512
Pediatrics	2,910	6,557	9,467	13,172
Neurology	759	2,293	3,052	3,057
Dermatology	2,163	3,300	5,463	5,439
Ear, Nose and Throat	7,004	13,072	20,076	17,748
Orthopedic	545	1,645	2,190	1,937
Eye	3,133	11,659	14,792	14,607
Hay-fever	202	4,380	4,582	5,647
Dental	2,944	2,766	5,710	5,775
Totals	58,119	148,726	206,845	204,618

An analysis of these figures shows the year has been uneventful. The increase in attendance continues. There was a gain in admissions slightly over last year, 119, and a gain of more than 2,000 in revisits.

The Pediatric Clinics show a marked decrease. This difference is largely accounted for by the fact that during the year 1925 a great many children returned frequently for tuberculin serum. In 1926 the administration of tuberculin serum was discontinued. In the Medical Clinics there was a small decrease in admissions but the number of revisits increased. In the Hay-fever and Asthma Clinics, there was a decline in both admissions and revisits. Special reports of these Clinics appear elsewhere. In the Neurology, Dermatology and Dental Clinics the attendance remains almost the same as that of the previous year. With the exceptions noted above, all other Clinics increased in attendance.

The Obstetrical Clinic shows an increase of 587 visits. We are pleased to note this increase is largely due to a higher percentage of revisits and that desertions from the Clinic were practically unknown. Excellent results were obtained in the education of the patients in the importance of prenatal supervision and the very great importance of returning to the Clinic after delivery for examination. There was no falling off in the number of new-born babies brought to the Pediatrics Clinics for observation.

The Orthopedic Clinics, year by year, show a steady increase. The Gynecology Clinics gained 1,686 in admissions and revisits. The G. U. Clinics for women remained practically stationary in admissions, but gained over 500 in revisits.

This Covered Passageway Erected 1926
PERSIFOR S. CAMPBELL,
BENEFACTOR

The attendance in the G. U. Clinics for men and the Salvarsan Clinics, shows an increase in both admissions and revisits and a proportionately large increase in work, as is shown by the statistics which follow:

January 26th, 1927.

Number of Microscopic Examinations in Venereal Clinics	913
Number of patients referred to Hospital for Venereal Clinics	364
Number of doses of Arsphenamine given in Venereal Clinics	6,209
Number of treatments in Non-Venereal Clinics	2,582
Number of doses of Tartar Emetic given Intravenously	379
Total number of treatments in Venereal Clinics, including Arsphenamine and Tartar Emetic	24,569

The Ear, Nose and Throat Clinics lead all other individual Clinics in admissions and total revisits: 7,004 admissions; 20,076 total visits, an increase over the previous year of 2,328 total visits. They referred to the Hospital for operations, 1,352 patients.

The Eye Clinics admitted 3,133 new cases; the total visits were 14,792 with 190 patients referred to Hospital for operations.

The Surgical Clinics made slight gains in both admissions and revisits. During the year 1,361 minor operations were performed in the Clinics.

The work in the Clinic Laboratory continues to increase. The total number of tests made was 31,329; 13,855 of which were Wassermanns.

The number of X-Rays made for the Clinic was 6,129, an increase of 721 over the previous year.

Number of patients admitted to Hospital	4,257
Number of patients discharged from Clinics	6,962
Number of patients who did not return in two months—Discharged	29,249
Total number of patients discharged from Clinics	36,211

We are deeply gratified that visits to our Record Department for histories of Clinic Cases are growing daily more frequent. In January of 1926, 48 calls were made; in December, 111. The total number of calls for histories during the year was a few less than 1,000.

Again we beg to acknowledge our indebtedness to the Visiting Staff for their unflagging interest and co-operation, and for their very excellent attendance. We wish also to express our appreciation to the employees for their faithful services, and to the various individuals, and the other departments for their generous and unfailing co-operation.

SARA BABB, R. N.,

Superintendent of Clinics.

SOCIAL SERVICE DEPARTMENT

January 15th, 1927.

Dr. Wm. W. Leake, Superintendent Charity Hospital,
New Orleans, Louisiana.

My dear Mr. Leake:

It seems but a brief time since the last annual report has been submitted. During each current year the momentum of the work does not permit a pause for retrospection. Annual reports compel a cessation of activities long enough to look back on what has been accomplished and visualize the goal that should be reached.

While the figures in the statistical report appended vary, plus and minus, in comparison to the report of last year, the road over which the department travelled to obtain these results, somewhat varied with that of previous years due largely to the change in the policies and technique of agencies on which we depended for co-operation in the rehabilitation of our patients.

The department has endeavored to promote the co-operation and co-ordination of the health and social agencies, as well as to strengthen the relationship of physician and social work in the Hospital.

Valuable assistance has been rendered to the affiliating agencies through this department by the release of medical information invaluable in the crystallization of their plans for their clients.

In our State-wide service we have endeavored as far as conditions would permit to assist in the care of the patients sent from the parishes. Doctors, social agencies and parish authorities have been urged to make proper provision at the time of entry of their charges to the institution for their return transportation and also for their after care.

Among the chronic sick, while available permanent institutionalization has been given many, great stress has been laid upon the return of the patient to the family where they will be happier and more economically supported.

The seven hundred and fifty-eight patients who have been removed through the efforts of the Social Service Department means not only a series of letters, telephone calls or visits to force the family to assume their responsibility, but it also means a releasing of Hospital beds held by these chronics, thus enriching the functioning of the Hospital.

Definite contributions have been made in the follow-up care and social treatment in the cardiac, tubercular, diabetic, neurotic, orthopedic and pediatric groups. The work, however, in these groups, as well as in other active groups, has been curtailed by our limited staff, the personnel of which remains as in 1925, viz., a director, five case workers, one whole and one part time stenographer.

The possibilities of the department are so great and the extension so necessary that we are hoping the requisite funds may be forthcoming for its use.

I cannot conclude without extending the department's appreciation to our Superintendent, the Board of Administrators, the Doctors, the Sisters, the Clinical Secretary, and all attaches of the Hospital, the co-operating agencies and the many friends who have made it possible for us, by their assistance, to achieve what we have.

Respectfully,

LAURA BACHMAN,

Director Social Service.

REPORT OF SOCIAL SERVICE DEPARTMENT

December	201	14	8	22	8	13	21	2	2	4	21	13	34	81	40.29%
GRAND TOTALS	2,228	113	109	222	123	164	287	42	49	91	168	120	288	888	39.85%

Apparent Gross Mortality: 2,228 Deaths among 27,498 Cases, is a trifle over 8. %

Net Mortality:: Deducting 888 Deaths from incurable causes, as per above Table, is 4.87%

Nine Patients died on the Operating Table, viz.: Four white males, one white female, four colored females, one being a child

CONDENSED REPORT OF RECORD ROOM FOR THE YEAR 1926
GENERAL RECAPITULATION OF CASES

	TOTAL	CURED	IMPROVED	STATIONARY	DIED
Medical Histories Filed	7,790	460	4,063	1,930	1,337
Surgical Histories Filed	12,630	1,344	8,692	1,907	687
Gynecological Histories Filed	3,022	255	1,818	869	80
Obstetrical Histories Filed	4,056	2,897	454	581	124
GRAND TOTALS	27,498	4,956	15,027	5,287	2,228

Infants Detained with Mothers, 18. Stillborn, 117.

Number of Histories allowed to be taken out for Teaching and other legitimate uses, 5,264. (Besides which, hundreds of Histories were consulted by Physicians in the Record Room.)

SUMMARY OF OBSTETRICAL CASES IN 1926

As per Histories Filed in Record Room

There were 1,478 Maternity Cases Delivered in the Hospital.

White.....	504	Primiparae.....	653
Colored.....	974	Multiparae.....	825

MANNER OF DELIVERY

Naturally.....	1,398
By Forceps.....	44
By Podalic Version (some with aid of Forceps).....	22
By Caesarian Section (2 Mothers died, 6 Infants delivered alive).....	14

There were 24 Cases of Twin Parturition.

There was no Case of Triple Parturition.

MORTALITY AMONG MOTHERS

There were 15 Deaths among the Mothers; only a trifle over 1 per cent.

Causes of Death reported as follows:

From Eclampsia.....	2
From Shock (4 Cases of Placenta Previa).....	5
From Pneumonia.....	3
From Organic Heart Disease.....	1
From Tuberculosis.....	1
From Septic Fever.....	1
From Uncinariasis.....	1
From Tetanus.....	1
	<hr/> 15

The number of Children Born was 1,502.

Male.....	789	Delivered Living.....	1,385
Female.....	713	Stillborn.....	117
		1,502	1,502
